Monthly Message:

It's never too early to read to your children!

Young children need nutritious food, stimulating toys and lots of hugs and kisses. But beginning at birth, they also need to be talked, sung and read to.

New research from Stanford psychologists shows that by talking and reading to your child, parents can help their children learn language more quickly, which speeds up vocabulary growth.

We have known the importance of reading to your child for a long time, but this new evidence is showing that language and literacy really begins at birth. Gaps can emerge as early as 18 months between children who are read and talked to and those who have those interactions less often.

Parents, caregivers and teachers have the most influence on children's language and literacy development. Don't wait until preschool or kindergarten to start sharing books with your child. Sharing books with your children can even help them get ready to listen and learn in school.

An easy place to begin a new reading routine is bedtime. Set aside time before bed with the TV off and start with one of your childhood favorites or visitscholastic.com for a list of book ideas for young children.

I like to read out loud!
